SCORING METHODOLOGY

This area indicates the scoring methodology being used. Reference the Appendix page for an explanation of the various methodologies.

CAP SCORES

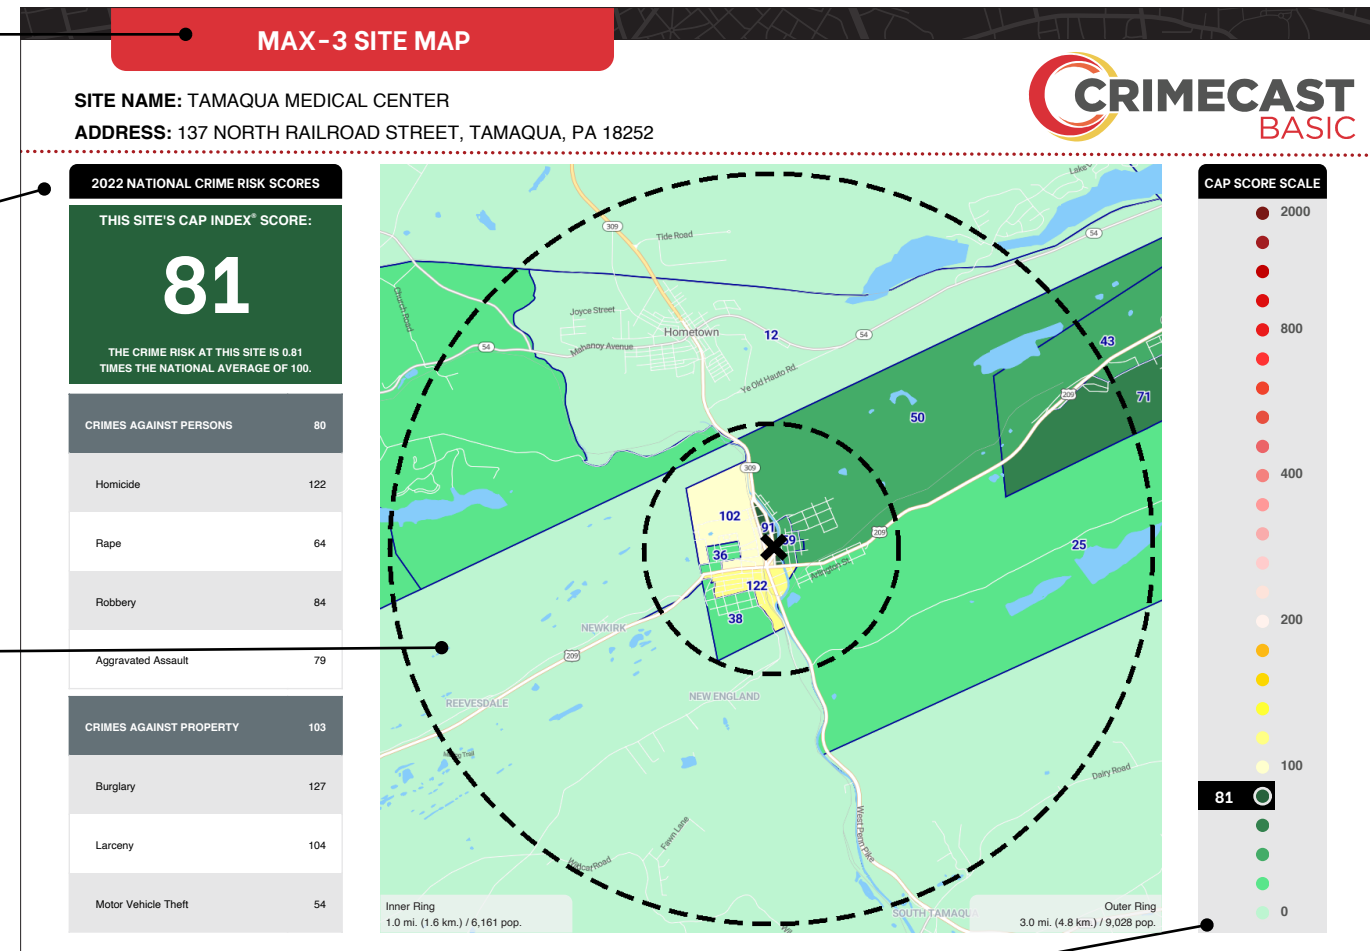

The **National CAP Index® Score** indicates the overall risk of crime at the address.

The report also includes nine specific CAP Scores pertaining to **Crimes Against Persons** and **Crimes Against Property**.

CRIMECAST® MAP

The **Site Map** shows the **Block Group Score** for each "neighborhood" surrounding a given location. The Site Map helps depict the potential origin of criminal activity occurring at the location.

The Census Bureau defines over 215,000 block groups in the United States. Each one typically contains thousands of residents with similar socioeconomic characteristics.

Every block group is assigned a numeric risk score and a corresponding risk shading.

CAP SCORE SCALE

CAP Scores range from 0 to 2000, with 0 representing the lowest risk and 2000 the highest; 100 is average. A score of 600 is 6 times the National Average, and a score of 25 indicates a risk that is 1/4 of the National Average.

ABOUT CRIMECAST SCORING

THE CAP INDEX® SCORING SYSTEM

The CAP Index® Scoring System uses sophisticated forecasting techniques that combine demographic and business statistics with crime and loss data to calculate crime risk. The foundation of our forecasting approach is the “Social Disorganization Theory,” which asserts that higher degrees of social discord in a neighborhood tend to correlate with higher levels of crime.

SCORING METHODOLOGIES

CAP Scores for a specific business application are generated using one of four CAP Index® Scoring Methodologies. These scoring methodologies account for the fact that perpetrators often travel varying distances to commit crimes (the “journey to crime”) depending on the target. The scoring methodologies also consider the nature and attractiveness of different types of targets for different types of crimes. Each methodology designates a progressively larger “sphere of influence” that is used to assess the risk of crime. Each sphere is defined by a maximum geographic radius or a population threshold. These spheres have different components that drive the overall crime risk score. The inner part of the sphere focuses on the nearest neighborhoods and receives the higher percentage of the weight. The outer part of the sphere considers more distant avenues of vulnerability and receives the remaining percentage of the weight.

Scoring Methodology	Outer Ring / Population for Assessment	Weight	Inner Ring / Population for Assessment	Weight
MAX-1	1 mile (1.6 km.) or 25,000 people	N/A	1 mile (1.6 km.) or 25,000 people	100%
MAX-3	3 miles (4.8 km.) or 100,000 people	20%	1 mile (1.6 km.) or 25,000 people	80%
MAX-6	6 miles (9.7 km.) or 400,000 people	20%	2 miles (3.2 km.) or 100,000 people	80%
MAX-12	12 miles (19.3 km.) or 1,600,000 people	33%	4 miles (6.4 km.) or 400,000 people	67%
